INDEX TO ASSESSMENT REPORTS 1864-1980

INTRODUCTION

This report is a bibliographic index, covering the period 1864 up to the end of 1980, to data contained in the non-confidential mineral exploration assessment reports of the Nova Scotia Department of Mines and Energy. The purpose of this index is to provide sources of assessment report data, by title only; the index does not provide the actual assessment report data itself. The assessment report data must be obtained from the actual sources cited in this index. All the assessment reports cited in this index have been microfilmed and can be consulted in the libraries of the Halifax and Stellarton offices of the Department.

This report supercedes the previously published Report 77-2 *Index to Mineral Assessment Reports*, by Diane J. Gregory, and it should be used in place of Report 77-2. Annual supplements to this present index will be produced, and at the end of an appropriate time interval these supplements will be combined and a new index to assessment reports covering that specific time interval will be published.

Microfiche copy or hard copy (produced from microfilm) of all the assessment reports cited in this index can be purchased from Precision Microfilming Services, 6061 Young Street, Halifax, N.S., B3K 2A3 (902 455-5431). If ordering copies of assessment reports, please quote the full assessment report number from the titles e.g. 11D/15A 21-H-67(15).

INDEX ORGANIZATION

Each assessment report title usually contains the following information:

- Commodity type
- Geographic location
- County
- Province
- Property licence holder and/or exploration company
- Report title
- Abbreviated description of report contents
- Author(s) - personal and/or company
- Assessment report number
- Date the report was written

The titles of the assessment reports in this index are primarily organized and ordered according to the Claim Reference map system used by the Nova Scotia Department of Mines and Energy for the purpose of map staking of mineral exploration claims. This Claim Reference map system is based upon the National Topographic System, in which each Claim Reference map is actually one quarter of a 1:50,000 NTS map sheet (Figure 1). For example, NTS map sheet 11D/10 comprises Claim Reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, the Claim Reference maps being lettered in a clockwise direction beginning with the southeast corner of the 1:50,000 NTS map sheet.

Assessment reports which geographically fall within an area covered by one Claim Reference map (e.g. 11D/10A), will have their titles listed only once in this index, under that particular Claim Reference map number. Assessment reports which geographically fall within an area covered by two or more Claim Reference maps will have their titles listed under each one of the applicable Claim Reference map numbers. For example, an exploration program near Windsor (Figure 1), was conducted in an area falling within the boundaries of Claim Reference maps 21A/16D, 21H/01A, 11E/04B and 11D/13C. Consequently, the title of that assessment report is listed under each one of these particular Claim Reference map numbers. Thus, a report title may be repeated under several different Claim Reference map numbers.

ASSESSMENT REPORT NUMBERS

Each assessment report is uniquely identified by an assigned report number e.g. 11D/15A 21-H-67(15). The report number is an alpha-numeric code consisting of five components, namely: NSDME Claim Reference map number; commodity type; county; geographic location; and successive report number. Thus-

- 11D/15A = Claim Reference map number
- 21 = Commodity type (= Gold)
- H = County (= Halifax County)
- 67 = Geographic location (= Tangier)
- (15) = Successive report number (= the fifteenth report in the assessment file 11D/15A 21-H-67)

The NSDME Claim Reference map number indicates the part of the province covered by the assessment report. Assessment reports covering more than one Claim Reference map area can show only one (main) Claim Reference map number in their report numbers. However, as explained in the section on INDEX ORGANIZATION, their titles are still listed under the other (subsidiary) Claim Reference map numbers. Commodity type represents the primary element, mineral or rock material that forms the target of the exploration activities described in the assessment report (Table 1). In many cases, assigning one commodity to an assessment report is an arbitrary

decision, especially where several commodities form the target of the exploration activities, e.g. tin, tungsten and molybdenum. In such cases, although the report is identified by only one commodity in the report number, the other commodities still exist as keywords, and the report is identified under these commodities in the keyword index (explained below). County represents one of the eighteen broad, formal, political and geographic areas of Nova Scotia in which the geographic location of the assessment report is found (Table 1). For convenience, unofficial "counties" such as Cape Breton Island, Offshore and Nova Scotia (general) have also been added to this category. Geographic location represents a specific town, village, lake, stream, hill, swamp, etc., that geographically falls within the area covered by the assessment report. Lists of these geographic locations and their corresponding number codes are kept in the Department libraries. The successive report number (01 and onward) represents an individual, complete report assigned to that particular assessment file, basically numbered chronologically from oldest to most recent report. The number (00), when used, represents a miscellaneous information category.

The assigned assessment report numbers form the hierarchical basis upon which this index has been sorted and ordered. Thus, the first order of sorting is based upon the Claim Reference map number; the second order of sorting is based upon the commodity number; the third order of sorting is based upon the county letter; the fourth order of sorting is based upon the geographic location number and the fifth order of sorting is based upon the successive report number.

KEYWORD INDEX (REPORT 81-5)

Concepts or keywords are lists of the most relevant and important terms, stored in the GEOSCAN data base (explained later), which are used to more fully describe the subject content of each assessment report. For each assessment report, the keywords would include the title information as well as terms describing NTS areas, mineral and rock names, types of mineralization, type of exploration surveys, diamond drilling, chemical analyses, assays etc. In this index, these keywords have not been included with each report title, since their inclusion would substantially add both to the physical size of this index and to its production and retailing costs. However, a keyword index to all the assessment reports listed in this index has been produced to accompany this index. The keyword index is an alphabetic listing of all keywords that exist in the GEOSCAN data base used to describe all the assessment reports in this index, cross-referenced against the assessment reports in which they occur. In effect, the keyword index allows the complete assessment report records to be searched for any particular keyword. For example, all assessment reports describing uranium exploration would be found listed as a series of assessment report numbers against the keyword "uranium" in the alphabetic listing of keywords.

This keyword index is available on microfiche only (x24 reduction), and can be purchased through the libraries in the Halifax and Stellarton offices of the Department.

GEOSCAN

This index was prepared from magnetic tapes generated from the GEOSCAN data base. GEOSCAN (formerly the Canadian Index to Geoscience Data) is the computer-based, national geological data base for Canada, operated by the Canada Centre for Geoscience Data, Geological Survey of Canada in conjunction with participating federal and provincial geoscience agencies, of which the Nova Scotia Department of Mines and Energy is an active participant. Specific search enquiries can be conducted on, and custom indexes can be produced from the GEOSCAN data base, through on-line terminal connections in the Halifax office of the Nova Scotia Department of Mines and Energy.

ACKNOWLEDGMENTS

We sincerely thank Kay L. Gunn and David S. Reade of the Canada Centre of Geoscience Data, Geological Survey of Canada for their consultations and advice and for conducting the various searches of the GEOSCAN data base that enabled this index to be prepared. We also thank Colin Whittaker of C.M. Whittaker & Associates Ltd. for advice and suggestions regarding text editing. Finally, we express our gratitude to Dr. Jack Garnett, Director, Mineral Resources Division and Dan Murray, Chief Resource Geologist, Resource Geology Section, Nova Scotia Department of Mines and Energy, for their continued support and encouragement throughout this project.

TABLE I
Alpha-numeric Codes for Commodity Types and Counties
used in NSDME Assessment Report Numbers

Commodity Types				Counties	
1	Aluminum	32	Marble	A	Annapolis
2	Anhydrite	33	Marl	B	Antigonish
3	Antimony	34	Mica	C	Cape Breton
4	Arsenic	35	Molybdenum	D	Colchester
5	Aggregates	36	Moulding Sand	E	Cumberland
6	Barite	37	Oil Shale	F	Digby
7	Base Metals	38	Peat	G	Guysborough
8	Beryllium	39	Petroleum	H	Halifax
9	Clay	40	Potash	I	Hants
10	Coal	41	Silica	J	Inverness
11	Cobalt	42	Salt	K	Kings
12	Columbium	43	Sand and Gravel	L	Lunenburg
13	Copper	44	Sandstone	M	Pictou
14	Diatomite	45	Silver	N	Queens
15	Diorite	46	Slag	O	Richmond
16	Dolomite	47	Slate	P	Shelburne
17	Feldspar	48	Strontium	Q	Victoria
18	Fluorite	49	Talc	R	Yarmouth
19	Fullers Earth	50	Thorium	S	Nova Scotia (general)
20	Garnet	51	Tin	W	Offshore
21	Gold	52	Titanium	X	Cape Breton
